

COMICCRAFT

AI Comic Story Creator using Gemini Models

PHASE 1: Brainstorming & Ideation Phase

Project Concept

ComicCraft is a web-based AI application designed to transform a user's simple story idea into a personalized comic story with illustrations. The main concept is to combine AI-powered storytelling and image generation in one accessible creative platform.

Problem / Need Identified

Creating a complete comic normally requires story writing, character dialogue, scene planning, illustration, page layout, and final document preparation. ComicCraft aims to simplify these creative activities by automating the major steps through AI.

Idea Generation

- Allow the user to enter a custom story prompt instead of requiring a predefined story.
- Allow personalization through main character name, setting, story tone, and art style.
- Generate a structured panel-by-panel comic so that the story has a clear visual sequence.
- Provide both written content and AI-generated illustrations for the panels.

Planned User Scenarios

- A user can enter an idea such as a brave fox exploring an enchanted forest and receive a complete comic strip.
- A user can change the tone to funny and the art style to comic book and regenerate the comic according to those preferences.
- After reviewing the comic preview, the user can download the complete comic as a PDF.

Ideation Outcome

The brainstorming phase resulted in an end-to-end AI comic creation concept that combines personalized storytelling, character dialogue, visual generation, preview, and PDF export in a single web application.

Project documentation prepared for phase-wise submission.
