

COMICCRAFT

AI Comic Story Creator using Gemini Models

Phase 8 – Project Demonstration Phase

Project Submission Document

This document is prepared from the supplied ComicCraft project document and follows the phase-wise submission approach requested for the GitHub repository.

1. Demonstration Overview

- The demonstration phase presents the complete ComicCraft workflow from user input to final PDF export.
- The demonstration should show the working application, major AI steps, generated comic preview and final output.

2. Demonstration Objectives

- Demonstrate the user-facing comic creation flow.
- Show how creative inputs are collected.
- Show AI-generated five-panel outline processing.
- Show narration and dialogue generation.
- Show AI-generated comic illustrations.
- Show the sequential comic preview.
- Show downloadable PDF export and success confirmation.

3. Demonstration Environment

- Run the application locally using the configured Python environment.
- Start the FastAPI application using Uvicorn.
- Open the application in a web browser.
- Use the /docs endpoint when API-level demonstration is required.
- Ensure required API credentials and model dependencies are configured before demonstration.

4. Demonstration Step-by-Step

Step 1 – Open Homepage

- Display the ComicCraft input page.

Step 2 – Enter User Inputs

- Enter story prompt, character name, setting, tone and art style.

Step 3 – Generate Comic

- Submit the form and demonstrate the backend workflow.

Step 4 – Show AI Story Processing

- Explain that Gemini Flash produces the structured outline and Gemini Pro expands it into narration/dialogue.

Step 5 – Show Image Generation

- Explain that Stable Diffusion generates illustrations from the panel image prompts.

Step 6 – Show Comic Preview

- Display the generated panels sequentially with images and story content.

Step 7 – Export PDF

- Use the download action to create the final comic PDF.

Step 8 – Show Success Page

- Display the export confirmation and option to create another comic.

5. Demonstration of Main Components

Component	What to Demonstrate
Homepage	Input form and simple user interface
FastAPI	Request processing and route coordination
Gemini Flash	Five-panel structured outline
Gemini Pro	Narration and character dialogue
Stable Diffusion	Comic-style panel illustrations
Comic Preview	Panel-by-panel generated result
PDF Export	Final multi-page downloadable comic
Success Page	Export confirmation and restart action

6. Sample Demonstration Scenario

A demonstration can use a simple story prompt such as a character discovering an unusual event in a selected setting. The presenter should enter the character, setting, tone and art style, then show how the application transforms these inputs into a five-panel comic and downloadable PDF.

7. Demonstration Evidence

- Screenshot of homepage/input form.
- Screenshot of generated comic preview.
- Screenshot of PDF output or export result.
- Screenshot of export success page.
- Optional API /docs screenshot for backend demonstration.
- Optional GitHub repository screenshot showing phase-wise folders.

8. Presentation Flow

- Introduce the problem and ComicCraft solution.
- Explain the selected AI models and architecture.
- Demonstrate user input.
- Show the generated story and illustrations.
- Show comic preview.
- Export and display the final PDF.
- Explain project outcomes and possible future enhancements.

9. Future Enhancement Discussion

The source project identifies possible future enhancements such as user profiles, comic libraries and multi-page story arcs. These can be mentioned during demonstration as future extensions rather than as current implemented features.

10. Demonstration Checklist

- Application starts successfully.
- Homepage loads correctly.
- All required input fields are available.
- Comic generation route works.
- Five-panel outline is produced.
- Narration/dialogue is produced.
- Images are generated.
- Preview page displays the panels.
- PDF export is available.
- Success page appears after export.
- GitHub repository contains the phase-wise documents and project files.

11. Demonstration Conclusion

The demonstration phase communicates the complete working capability of ComicCraft. It connects the documented architecture and implementation to a visible end-to-end result: user prompt → AI-generated story → illustrations → comic preview → downloadable PDF.

Source Basis: Prepared from the supplied ComicCraft project document, using its stated milestones, activities, technologies, functions, routes, templates, workflow, deployment and output details.
